The numbers of unique users that appear are 1143.
4. What was the largest data export? And does it look out of the ordinary?
The largest data export is access_log-20131117. No it does not out of the ordinary.
5. What is the most common error found in the error logs?
The most common error found in the error log was
"/var/www/html/phpmyadmin".
6. Do you see anything, which is out of the ordinary?
Yes.
7. Write a short synopsis of what you found.

I found *** gilbc detected *** /usr/sbin/httpd: double free or corruption (!prev):0x00007f2e1e73a2do ***, along with a user being removed. I told it weird because most the errors were either wrong commands, logging fails or being denied access. So it stood out to me.
